◆scrap paper

1

2

Fold in half again.

3

Unfold and bring up bottom edges to align at the center. Turn over.

4

Fold down upper corners diagonally.

Why not give life to papers that are destined to be thrown away? Glossy catalogs, wrapping paper, flyers, or even magazine paper will make unexpectedly shaded, one-of-a-kind ornaments. These papers are heavy weight and perfect for objects. Plan your own color scheme by choosing coordinating page, or be adventurous for a surprising result.

Flopping Crane

See page 12.

Flatback Turtle

See page 10.

Vase

See page 22.

5

Fold down in half.

6

Fold in half again for a completed triangular piece.

7

Make a number of these pieces.

8

Interlock them one by one to construct a figure.

3

BASIC HORIZONTAL ASSEMBLY

Here is an easily assembled work that extends in one direction. Just remember to set the pocket edge of the piece to face the same side as you join them. A charming turtle will be created in no time with 70 prepared triangles.

#1 Piggyback Turtles, pink

See page 31 for detailed instructions.

#2 Piggyback Turtles, black

See page 31 for detailed instructions.

The turtle has been a symbol of longevity in Japan as seen by the adage: The crane lives a thousand years, the turtle, ten thousand years.

BABY TURTLE (See page 31 for details.)

Piggyback Turtles

Take 9 pieces. Apply glue onto the pointed tip of each piece, and stick together.

The first row is completed. Be sure to glue the points that connect the pockets.

Interlock second row pieces by inserting the peak of each first row into each pocket.

Interlock 11 rows in all, referring to the color chart on page 31.

Make head using 2 pieces.

Attach the head to the body for completed turtle.

PARENT TURTLE (See page 31 for details.)

Piggyback Turtles

Make body in the same manner as BABY TURTLE.

Make feet by gluing 2 pieces each.

Attach the feet and head for completed turtle.

CIRCULAR ASSEMBLY

When you join the pieces in a circle, they make a base for most three-dimensional objects that extend upward. Once you have learned the trick of the triangular piece, e.g. how each side of the triangle works, you can construct any shape you fancy. Start with small projects such as these doll-shaped containers.

#3 Japanese Dolls

See page 35 for detailed instructions.

March 3 is Japan's Doll Festival, to wish that all girls grow up healthy. This pair of dolls represents an ancient emperor and empress, and is a must decoration for any home with daughters. This cute version can be used as a container for candies.

Instructions (See page 35 for details.)

Japanese Dolls

② This sample shows different colors for comprehension. In the actual project, use a single shade.

Join 2 pieces by stacking a new piece onto adjacent points. Hold the new piece pocket side down and the right-angle point away from you. Make 12 of this.

Join two units by stacking on another piece. Then add another unit and join in the same manner until 25 pieces are used for each 1st and 2nd row. Reinforce the base by turning over and interlocking a further 25 pieces.

In the same manner, join 25 pieces on rows 3 to 5.

For row 6, change color according to the chart on page 35. This is a frontal view.

Work rows 6 to 20 referring to the color chart.

Attach head for completed doll.

Make an eboshi hat for the emperor.

Attach hair and place a golden crane on it.
